Overview

Content can be swiftly created for a variety of e-Learning delivery modes. We work with various Subject Matter Experts (SMEs) to design courses that cover the most complex topics. Tenable is different from other e-Learning companies with an emphasis on learning and not just on technology alone. Tenable aims to make organizations & Individuals to learn or relearn knowledge in the right context and unlearn what is irrelevant and outdated.

Tenable will strive to educate the Industry on how it should concentrate its efforts on using technology as an enabling factor. High quality service and an intimate knowledge of myriad technologies helped Tenable become a leading provider of IT and e-Learning services. It seems but natural that the next step in Tenable's march down the avenue of solutions is to enable other individuals to grow and benefit from their knowledge and resources.

Our Subject Matter Experts help us service our clients in K-12, University, Corporate and IT training verticals. The team is geared toward meeting the complex and demanding requirements of writing content for an international audience.

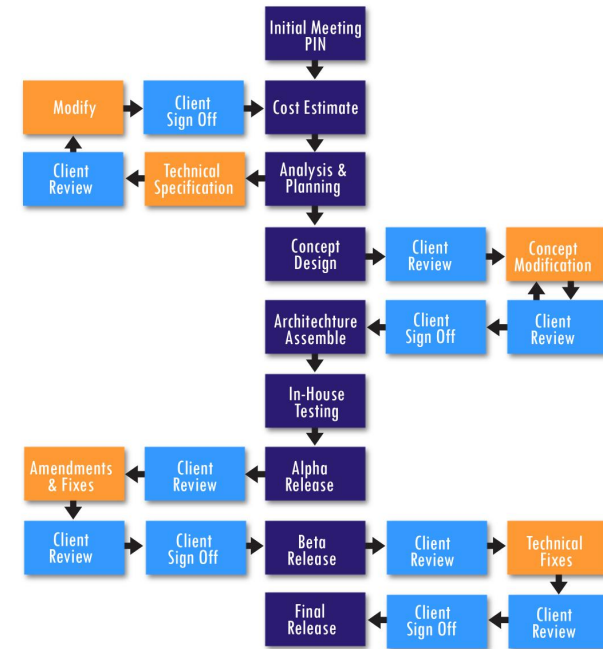

Tenable's Content & Design Services Team can help You design and deploy e-Learning solutions into your existing framework. We'll partner with you and help you ally your learning objectives with your business objectives and employ the right elucidation for you.

Vision

Making "learning", accessible and relevant , to all segments of learners, through use of every tool and technology that is available. e-Learning is revolutionizing education and training, we want to be in the forefront of claiming ownership and driving this process.

Project Management

Our Partners

Advantages

In every case, we create compelling e-Learning experiences that ensure users receive the information and skills they need to succeed. Using Tenable's business solutions, customers realize the benefits of streamlined business processes, maximizing the return on existing assets.

- Placing ourselves at the heart of the customer, enables us to provide cost effective and highly innovative ideas and solutions that make a real difference to how people run their businesses.
- Tenable offers the possibility of exercising control over the project development on a real-time basis with regards to means and methods of e-Learning development.
- Courses, content and activities based on a proven instructional design model with rich media learning resources (audio, video, animation and interactivity).
- Course design can include interactive simulations, case studies or games with ample opportunity for online skills practice, testing and feedback.
- Maintaining user interest through numerous opportunities for on-screen interaction and giving users the chance to practice new skills through simulations and exercises.

Our Services

Tenable will amalgamate its resources to deliver customized complete Content & Design learning solutions. The Key strategy for tenable will be its endurance and will be persistent in educating the current Industry and other segments about the benefits of e-Learning, and continue to broaden its product and service portfolio.

The framework that can help decide which learning tool to use in order to deliver and present the content in the right manner is the first step towards designing e-Learning development. The successful completion of any project involves a tradeoff of three factors: time, resources and scope.

Complete development cycle involves content development, graphics, media development, and integration into e-Learning programs and Learner Management Systems. We can work on an end to end solution, covering system analysis, design, development, and testing.

Our Array of Services Include:
